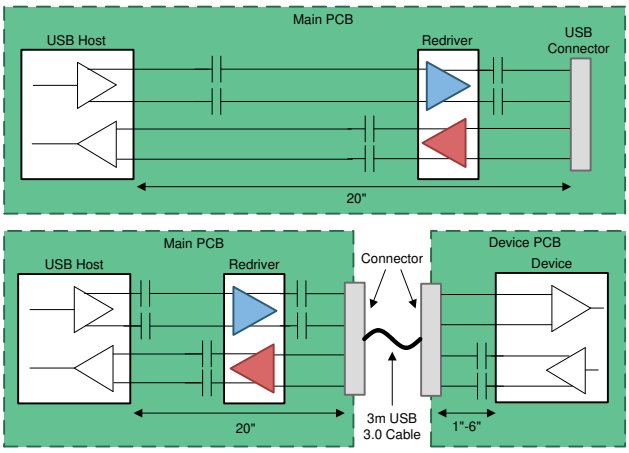
TUSB522P 3.3V 双通道 USB 3.1 GEN 1 转接驱动器、均衡器

1 特性

- 具有 3.3V 电源的 USB3.1 GEN1 5Gbps 双通道转接驱动器
- 超低功耗架构：
  - 有效：98 mA
  - U2、U3：1.2mA
  - 断开：265µA
  - 关断：60µA
- 出色的接收器均衡：
  - 3dB、6dB 和 9dB 三种增益设置（2.5GHz 时）
- 输出驱动器去加重功能，0dB、3.5dB 和 6dB 三种配置可供选择
- 自动 LFPS 去加重控制，满足 USB 3.1 认证要求
- 无主机或器件端要求
- 支持热插拔
- 工业温度范围：-40°C 至 85°C TUSB522PI
- 商用温度范围：0°C 至 70°C TUSB522P

2 应用

- 手机
- 平板电脑
- 笔记本电脑
- 台式机
- 扩展坞
- 背板和有源电缆



3 说明

TUSB522P 是一款支持 5Gbps 数据传输速率的第四代双通道单路 USB 3.1 GEN 1 转接驱动器和信号调节器。该器件采用超低功耗架构，在由 3.3V 电源供电运行时功耗非常低。转接驱动器还支持 USB 3.1 低功耗模式，可进一步降低空闲状态下的功耗。

双通道能力使得该系统能够在发送和接收数据路径上保持信号的完整性。接收器均衡有三种增益设置，用以克服插入损耗和码间串扰造成的通道性能退化。这些设置由 EQ 引脚控制。为了补偿传输线路损耗，输出驱动器还支持使用引脚 DE 配置去加重功能。此外，自动 LFPS 去加重控制有助于实现与 USB 3.1 完全兼容。这些设置使得 USB 3.1 第 1 代路径中的 TUSB522P 能够达到最佳性能，并延长信号传输距离以及实现灵活安置。

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

		MIN	MAX	UNIT
Supply Voltage Range(2)	V_{CC}	– 0.5	4	V
Voltage Range at any input or output terminal	Differential I/O	– 0.5	1.5	V
	CMOS Inputs	– 0.5	4	V
Junction temperature, T_J			105	°C
Storage temperature, T_{stg}		– 65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values are with respect to the GND terminals.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001(1)	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101(2)	±500	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7 Detailed Description

7.1 Overview

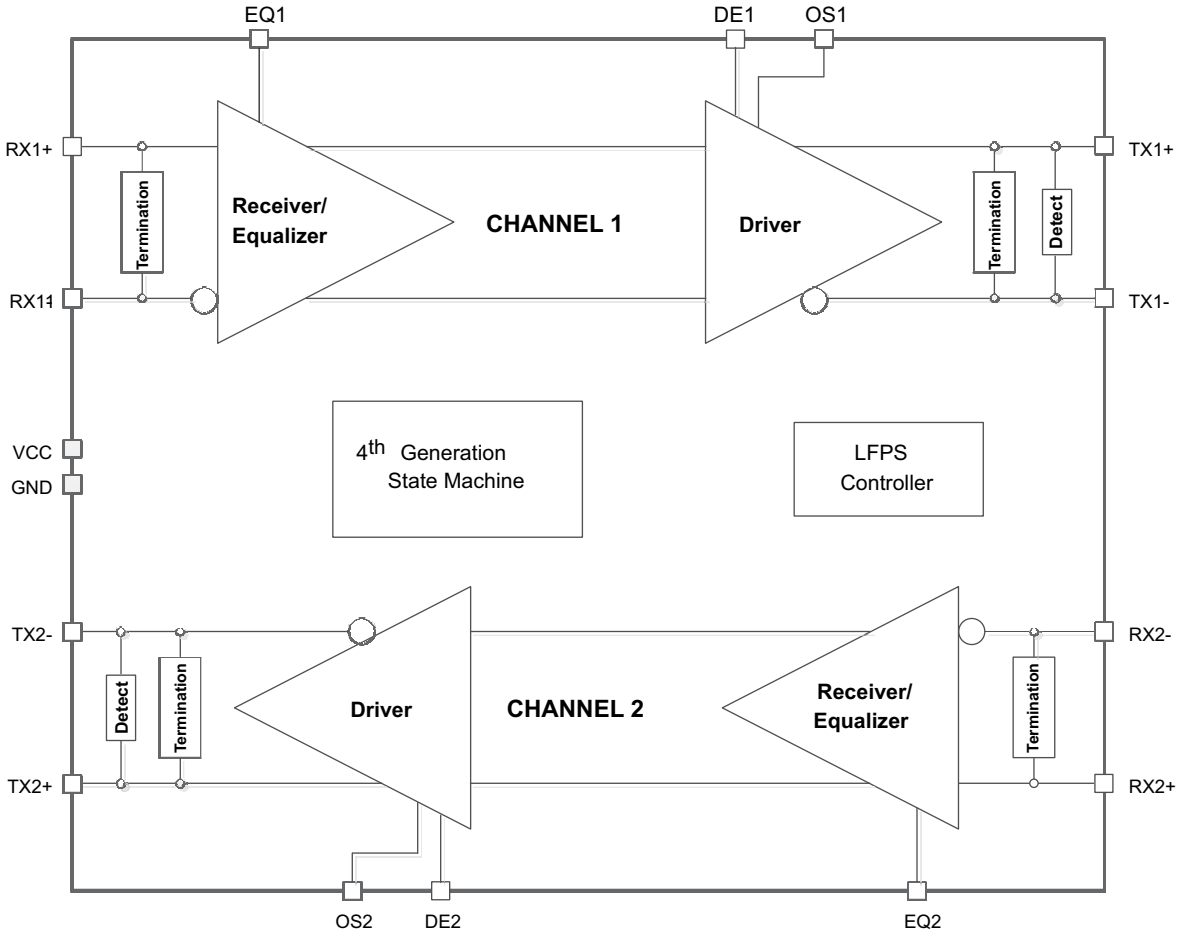
The TUSB522P is designed to overcome channel loss due to inter-symbol interference and crosstalk when 5Gbps USB3.1 GEN1 signals travel across a PCB or cable. The dual channel architecture is a one-chip, low-power solution, extending the possible channel length for transmit and receive data paths in an application. For a Host application, this enables the system to pass both transmitter compliance and receiver jitter tolerance tests.

The re-driver recovers incoming data by applying equalization that compensates for channel loss, and drives out signals with a high differential voltage. Each channel has a receiver equalizer with selectable gain settings. The equalization should be set based on the amount of insertion loss in channel 1 or 2 before the TUSB522P receivers. Likewise, the output drivers support configuration of De-Emphasis. Independent equalization and de-emphasis control for each channel can be set using EQ1/2 and DE1/2 pins.

The TUSB522P advanced state machine makes it transparent to hosts and devices. After power up, the TUSB522P periodically performs receiver detection on the TX pairs. If it detects a USB3.1 GEN1 receiver, the RX termination is enabled, and the TUSB522P is ready to re-drive.

The device ultra-low-power architecture operates at a 3.3-V power supply and achieves Enhanced performance. The automatic LFPS De-Emphasis control further enables the system to be USB3.1 compliant.

7.2 Functional Block Diagram



7.3 Feature Description

7.3.1 Receiver Equalization

The purpose of receiver equalization is to compensate for channel insertion loss and inter-symbol interference in the system before the input of the TUSB522P. The receiver overcomes these losses by attenuating the low frequency components of the signals with respect to the high frequency components. The proper gain setting should be selected to match the channel insertion loss before the input of the TUSB522P receivers. The gain setting may differ for channel 1 and channel 2.

7.3.2 De-Emphasis Control and Output Swing

The differential driver output provides selectable de-emphasis and output swing control in order to achieve USB3.1 compliance. The TUSB522P offers a unique way to adjust output de-emphasis and transmitter swing based on the OS1/2 and DE1/2 pins. The level of de-emphasis required in the system depends on the channel length after the output of the re-driver. The output swing and de-emphasis levels may differ for channel 1 and channel 2.

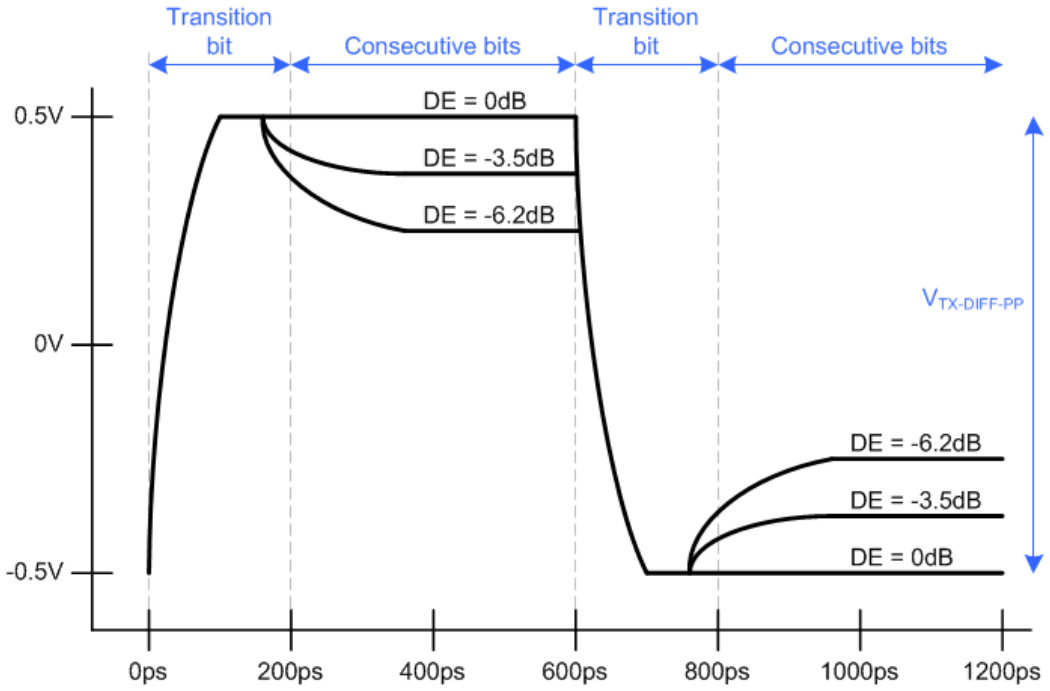


图 7-1. Transmitter Differential Voltage, OS = Floating

7.3.3 Automatic LFPS Detection

The TUSB522P features an intelligent low frequency periodic signaling (LFPS) controller. The controller senses the low frequency signals and automatically disables the driver de-emphasis, for full USB3.1 compliance.

7.4 Device Functional Modes

7.4.1 Device Configuration

表 7-1. Control Pin Settings (Typical Values)

PIN	DESCRIPTION	LOGIC STATE	TYP	UNITS
EQ1/EQ2	Receiver equalization amount	Low	3	dB
		Floating	6	dB
		High	9	dB
OS1/OS2	Transmit output swing amplitude for the transition bit	Low	0.9	Vpp
		High	1.1	Vpp
DE1/DE2	Transmit de-emphasis amount	Low	0	dB
		Floating	– 3.5	dB
		High	– 6.2	dB

7.4.2 Power Modes

The TUSB522P has 3 primary power modes:

7.4.2.1 U0 Mode (Active Power Mode)

During active power mode, U0, the device is transmitting USB SS data or USB LFPS signaling. The U0 mode is the highest power state of the TUSB522P. Anytime super-speed traffic is being received, the TUSB522P remains in this mode.

7.4.2.2 U2/U3 (Low Power Mode)

While in this mode, the TUSB522P periodically performs far-end receiver detection.

7.4.2.3 Disconnect Mode - RX Detect

In this state, the TUSB522P periodically checks for far-end receiver termination on both TX. Upon detection of the far-end receiver’s termination on both ports, the TUSB522P will transition to U0 mode.

7.4.2.4 Shutdown Mode

Shutdown mode is entered when the EN_RXD pin is driven low. This is lowest power setting for the device.

8 Application and Implementation

备注

以下应用部分中的信息不属于 TI 器件规格的范围，TI 不担保其准确性和完整性。TI 的客 户应负责确定器件是否适用于其应用。客户应验证并测试其设计，以确保系统功能。

8.1 Application Information

The TUSB522P is a dual-channel single-lane re-driver and signal conditioner designed to compensate for ISI jitter caused by attenuation through passive mediums such as traces or cables. The TUSB522P has two independent channels to allow optimization in both upstream and downstream directions through three EQ and six De-Emphasis settings.

8.2 Typical Application

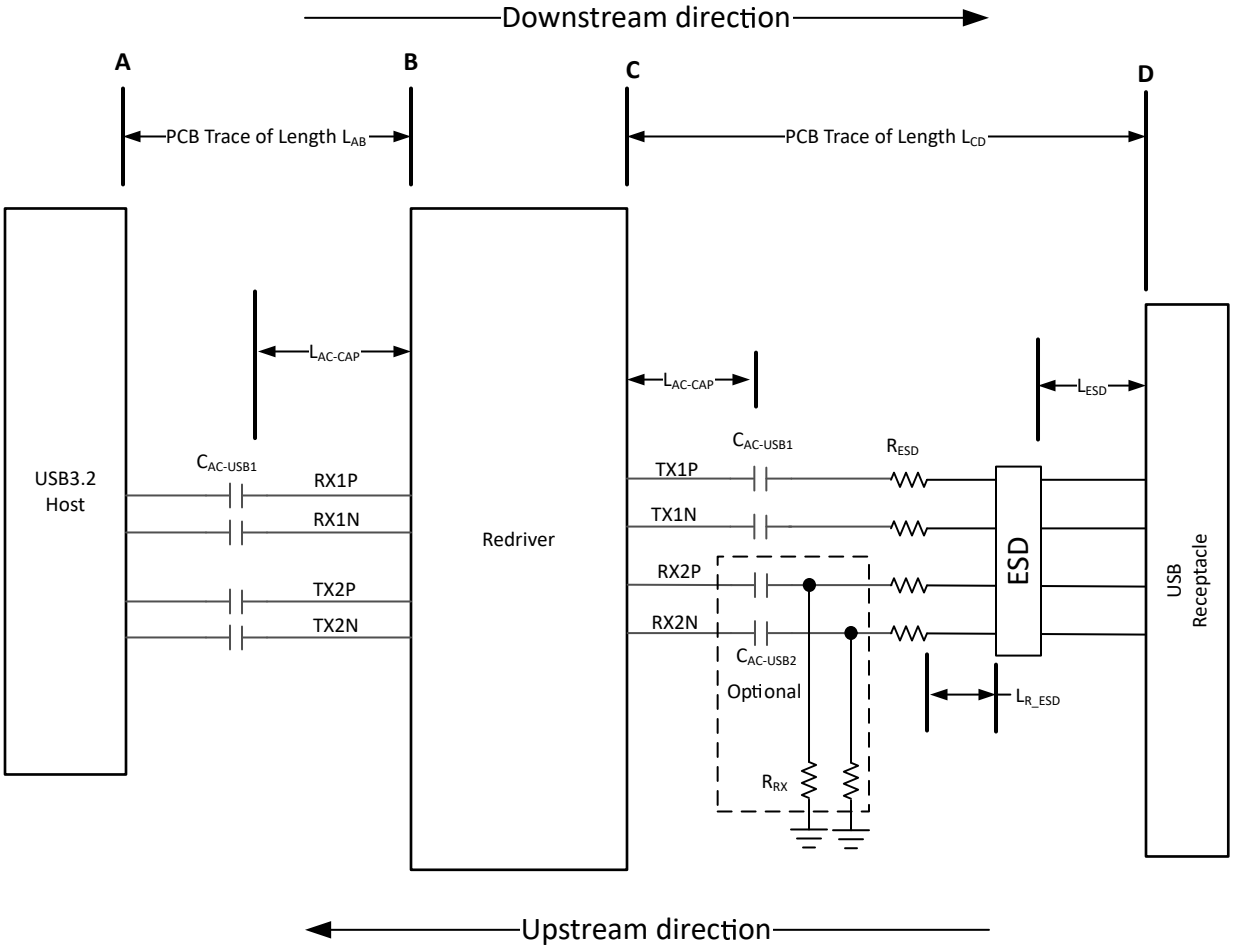

图 8-1. Embedded Host Application

The $C_{AC-USB1}$ and $C_{AC-USB2}$ should be placed between ESD and USB receptacle for systems designing for short to VBUS protection.

8.2.1 Design Requirements

For this design example, use the parameters provided in 表 8-1.

表 8-1. Design Parameters

PARAMETER	VALUE
Pre-channel A to B PCB trace length(1), L_{AB}.	1 inches ⩽ L_{AB} ⩽ 20 inches
Post-channel C to D PCB trace length(1), L_{CD}.	⩽ 6 inches
Minimum distance of the AC capacitors from TUSB522P, L_{AC-CAP}	0.25 inches
Maximum distance of ESD component from the USB receptacle, L_{ESD}	0.6 inches
Maximum distance of series resistor (R_{ESD}) from ESD component, L_{R_ESD}.	0.25 inches
$C_{AC-USB1}$ AC-coupling capacitor (75 nF to 265 nF)	100 nF
$C_{AC-USB2}$ AC-coupling capacitor (297 nF to 363 nF)	Options: • RX1 or RX2 are DC-coupled to USB receptacle • 330 nF AC-couple with R_{RX} resistor
Optional R_{RX} resistor (220-kΩ ± 5%)	Not used
Optional R_{ESD} (0-Ω to 2.2-Ω)	Not used
V_{CC} supply (3-V to 3.6-V)	3.3-V
EQ1 for RX1P/N (3, 6, or 9dB)	9 dB (EQ1 = High)
De-Emphasis 2 for TX2P/N (0, -3.5, and - 6.2 dB)	-6.2 dB (OS2 = Low, DE2 = High)
EQ2 for RX2P/N (3, 6, or 9 dB)	6 dB (EQ2 = Floating)
De-Emphasis 1 for TX1P/N (0, -3.5, and -6.2 dB)	-3.5 dB (OS1 = Low, DE1 = Floating)
Output Swing 1 (0.9 or 1.1 Vppd)	900 mV (OS1 = Low)
Output Swing 2 (0.9 or 1.1 Vppd)	900 mV (OS2 = Low)

(1) Maximum trace length assumes an insertion loss of 0.2 dB/inch/GHz. If insertion loss is more than 0.2 dB/inch/GHz, then maximum trace length must be reduced accordingly.

8.2.2 Detailed Design Procedure

The TUSB522P differential receivers and transmitters have internal BIAS and termination. Due to this, the TUSB522P must be connected to the USB Host and receptacle through ac-coupling capacitors. In this example, as depicted in 图 8-2, 100 nF capacitors are placed on TX2P, TX2N, RX1P, RX1N, TX1P and TX1N. No ac-coupling capacitors are placed on the RX2P and RX2N pins because it is assumed the device downstream of the TUSB522P will have ac-coupling capacitors on its transmitter as defined by the USB 3.1 specification. The system designer may desire to support short to VBUS protection. If this is the case, then a 330 nF ac-coupling capacitor should be placed on RX2P/N pins.

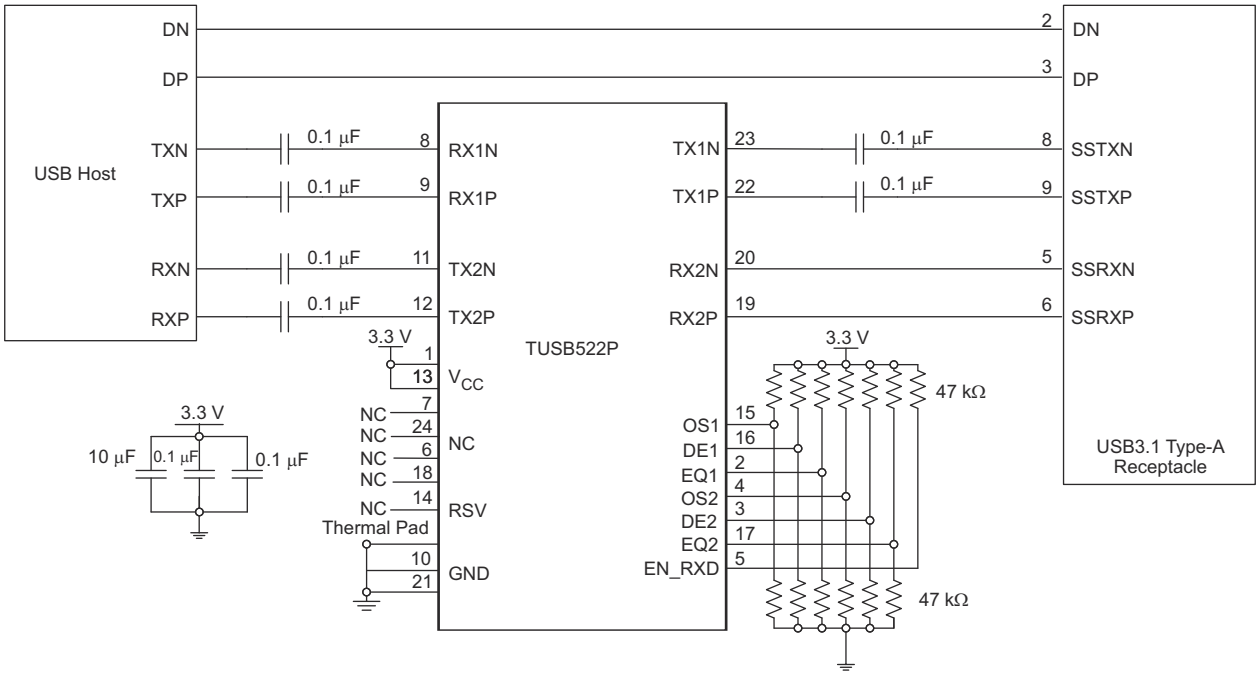

图 8-2. Embedded Host Application Schematic

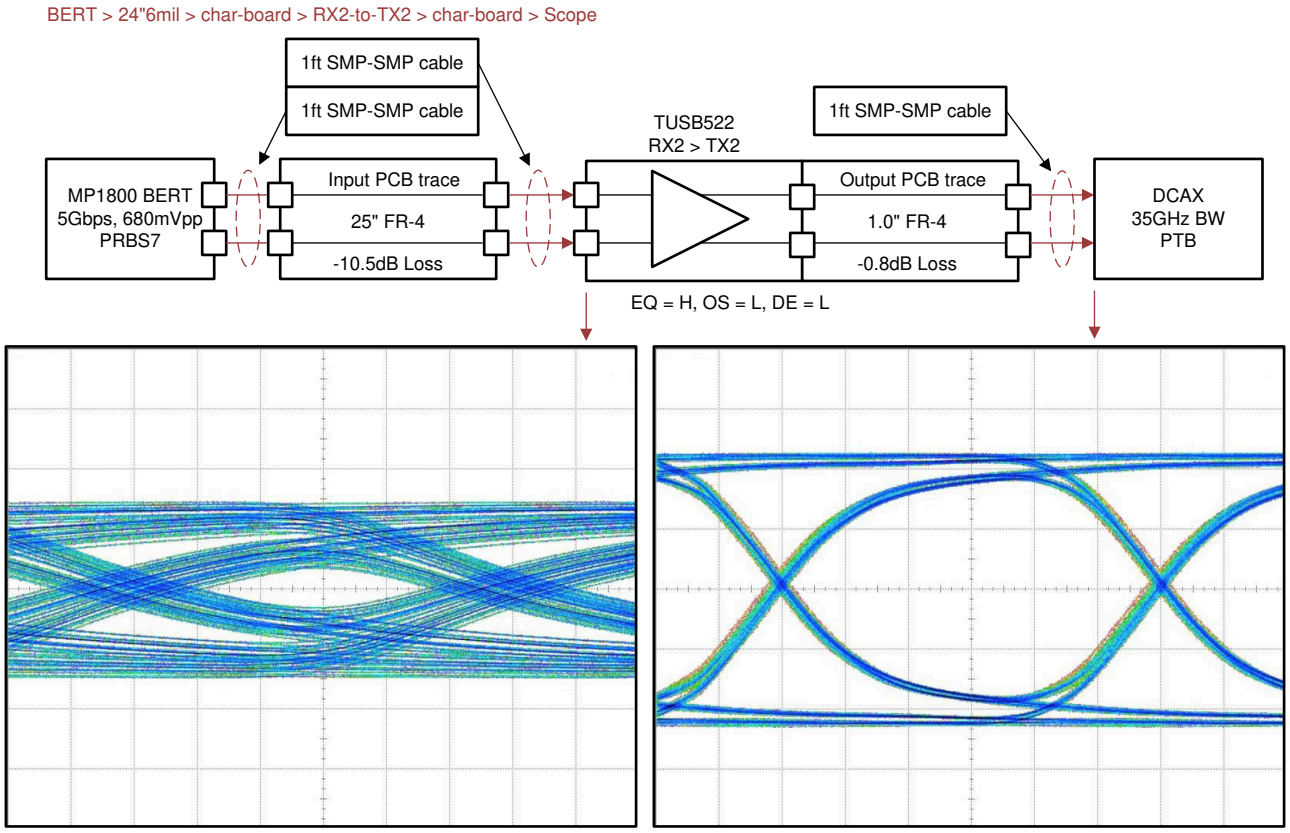
8.2.2.1 ESD Protection

It may be necessary to incorporate an ESD component to protect the TUSB522P from electrostatic discharge (ESD). It is recommended that the ESD protection component has working peak voltage of ⩾ 1.3 V, a breakdown voltage of ⩾ 2.3 V, and a clamp voltage of ⩽ 4.0 V. A clamp voltage greater than 4.0 V may require a R_{ESD} on each differential pin. The ESD component should be placed near the USB connector.

表 8-2. Recommended ESD Protection Component

Manufacturer	Part Number	Required R_{ESD} to pass IEC 61000-4-2 Contact ±8-kV
Nexperia	PUSB3FR4	2.2- Ω
Nexperia	PESD2V8Y1BSF	2.2- Ω

8.2.3 Application Curves



8.3 Power Supply Recommendations

The TUSB522P is designed to operate with a 3.3-V power supply. Levels above those listed in the *Absolute Ratings* table should not be used. If using a higher voltage system power supply, a voltage regulator can be used to step down to 3.3 V. Decoupling capacitors should be used to reduce noise and improve power supply integrity. A 0.1-µF capacitor should be used on each power pin.

8.4 Layout

8.4.1 Layout Guidelines

- RXP/N and TXP/N pairs should be routed with controlled 90-Ω differential impedance (±15%).
- Keep away from other high speed signals.
- Intra-pair routing should be kept to within 2mils.
- Length matching should be near the location of mismatch.
- Each pair should be separated at least by 3 times the signal trace width.
- The use of bends in differential traces should be kept to a minimum. When bends are used, the number of left and right bends should be as equal as possible and the angle of the bend should be ⩾ 135 degrees. This will minimize any length mismatch causes by the bends and therefore minimize the impact bends have on EMI.
- Route all differential pairs on the same of layer.
- The number of VIAS should be kept to a minimum. It is recommended to keep the VIAS count to 2 or less.
- Keep traces on layers adjacent to ground plane.
- Do not route differential pairs over any plane split.
- Adding test points will cause impedance discontinuity; and will therefore, negatively impact signal performance. If test points are used, they should be placed in series and symmetrically. They must not be placed in a manner that causes a stub on the differential pair.

- The 100-nF capacitors on the TXP and SSTXN nets must be placed close to the USB connector (Type A, Type B, and so forth).
- The ESD and EMI protection devices (if used) must also be placed as close as possible to the USB connector.
- Place voltage regulators as far away as possible from the differential pairs.
- To minimize crosstalk, TI recommends keeping high-speed signals away from each other. Each pair must be separated by at least 5 times the signal trace width. Separating with ground also helps minimize crosstalk.

9.4 静电放电警告

静电放电 (ESD) 会损坏这个集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

10 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.
