

SNx400, SNx4LS00, and SNx4S00 Quadruple 2-Input Positive-NAND Gates

1 Features

- Package Options Include:
 - Plastic Small-Outline (D, NS, PS)
 - Shrink Small-Outline (DB)
 - Ceramic Flat (W)
 - Ceramic Chip Carriers (FK)
 - Standard Plastic (N)
 - Ceramic (J)
- Also Available as Dual 2-Input Positive-NAND Gate in Small-Outline (PS) Package
- Inputs Are TTL Compliant; $V_{IH} = 2\text{ V}$ and $V_{IL} = 0.8\text{ V}$
- Inputs Can Accept 3.3-V or 2.5-V Logic Inputs
- SN5400, SN54LS00, and SN54S00 are Characterized For Operation Over the Full Military Temperature Range of -55°C to 125°C

2 Applications

- AV Receivers
- Portable Audio Docks
- Blu-Ray Players
- Home Theater
- MP3 Players or Recorders
- Personal Digital Assistants (PDAs)

3 Description

The SNx4xx00 devices contain four independent, 2-input NAND gates. The devices perform the Boolean function $Y = A \cdot B$ or $Y = A + B$ in positive logic.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision C (November 2016) to Revision D Page

- Changed *Typical Application* Diagram see *Application and Implementation* section..... 1

Changes from Revision B (October 2003) to Revision C Page

- Added *ESD Ratings* table, *Feature Description* section, *Device Functional Modes*, *Application and Implementation* *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section. 1
- Changed *Ordering Information* table to *Device Comparison Table*; see *Package Option Addendum* at the end of the data sheet..... 1
- Changed Package thermal impedance, $R_{\theta JA}$, values in *Thermal Information* table From: 86°C/W To: 90.9°C/W (D), From: 96°C/W To: 102.8°C/W (DB), From: 80°C/W To: 54.8°C/W (N), and From: 76°C/W To: 89.7°C/W (NS)..... 6

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

	MIN	MAX	UNIT
Supply voltage, V _{CC} ⁽²⁾		7	V
Input voltage	SNx400 and SNxS400		5.5
	SNx4LS00		7
Junction temperature, T _J		150	°C
Storage temperature, T _{stg}	–65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Voltage values are with respect to network ground terminal.

6.2 ESD Ratings: SN74LS00

	VALUE	UNIT
V _(ESD) Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±500
	Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±2000

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 500-V HBM is possible with the necessary precautions.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 250-V CDM is possible with the necessary precautions. Pins listed as ±2000 V may actually have higher performance. ESD Tested on SN74LS00N package.

7 Parameter Measurement Information

7.1 Propagation Delays, Setup and Hold Times, and Pulse Width

- NOTES:
- C_L includes probe and jig capacitance.
 - All diodes are 1N3064 or equivalent.
 - Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
 - S1 and S2 are closed for t_{PLH} , t_{PHL} , t_{PHZ} , and t_{PLZ} ; S1 is open and S2 is closed for t_{PZH} ; S1 is closed and S2 is open for t_{PZL} .
 - All input pulses are supplied by generators having the following characteristics: $PRR \leq 1$ MHz, $Z_O \approx 50 \Omega$; t_r and $t_f \leq 7$ ns for Series 54/74 devices and t_r and $t_f \leq 2.5$ ns for Series 54S/74S devices.
 - The outputs are measured one at a time with one input transition per measurement.

8 Detailed Description

8.1 Overview

The SNx4xx00 devices are quadruple, 2-input NAND gates which perform the Boolean function $Y = \overline{A \cdot B}$ or $Y = \overline{A} + \overline{B}$ in positive logic.

8.2 Functional Block Diagram

8.3 Feature Description

The operating voltage of SN74xx00 is from 4.75-V to 5.25-V V_{CC} . The operating voltage of SN54xx00 is from 4.5-V to 5.5-V V_{CC} . The SN54xx00 devices are rated from -55°C to 125°C whereas SN74xx00 device are rated from 0°C to 70°C .

8.4 Device Functional Modes

[Table 1](#) lists the functions of the devices.

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The SNx4xx00 devices are quadruple, 2-input NAND gate. A typical application of NAND gate can be as an error indicator as shown in [Figure 3](#). If either of the sensor has an error, the error flag is high to indicate system error.

9.2 Typical Application

Figure 3. Typical Application Diagram

9.2.1 Design Requirements

These devices use BJT technology and have unbalanced output drive with I_{OL} and I_{OH} specified as per the [Recommended Operating Conditions](#).

9.2.2 Detailed Design Procedure

- Recommended Input Conditions:
 - The inputs are TTL compliant.
 - Because the base-emitter junction at the inputs breaks down, no voltage greater than 5.5 V must be applied to the inputs.
 - Specified high and low levels: See V_{IH} and V_{IL} in [Recommended Operating Conditions](#).
- Recommended Output Conditions:
 - No more than one output must be shorted at a time as per the [Electrical Characteristics: SNx400](#) for thermal stability and reliability.
 - For high-current applications, consider thermal characteristics of the package listed in [Thermal Information](#).

Typical Application (continued)

9.2.3 Application Curve

10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in [Recommended Operating Conditions](#) for each of the SNx4LS00, SNx4S00, and SNx400 devices.

Each V_{CC} pin must have a good bypass capacitor to prevent power disturbance. For devices with a single supply, 0.1 μF is recommended; if there are multiple V_{CC} pins, then 0.01 μF or 0.022 μF is recommended for each power pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. A 0.1 μF and a 1 μF are commonly used in parallel. The bypass capacitor must be installed as close to the power pin as possible for best results.

11 Layout

11.1 Layout Guidelines

When using multiple bit logic, devices inputs must never float.

Devices with multiple-emitter inputs (SN74 and SN74S series) need special care. Because no voltage greater than 5.5 V must be applied to the inputs (if exceeded, the base-emitter junction at the inputs breaks down), the inputs of these devices must be connected to the supply voltage, V_{CC} , through series resistor, R_S (see Figure 5). This resistor must be dimensioned such that the current flowing into the gate or gates, which results from overvoltage, does not exceed 1 mA. However, because the high-level input current of the circuits connected to the gate flows through this resistor, the resistor must be dimensioned so that the voltage drop across it still allows the required high level. Equation 1 and Equation 2 are for dimensioning resistor, R_S , and several inputs can be connected to a high level through a single resistor if the following conditions are met.

$$R_{S(min)} = \frac{V_{CCP} - 5.5 \text{ V}}{1 \text{ mA}} \quad (1)$$

$$R_{S(max)} = \frac{V_{CC(min)} - 2.4 \text{ V}}{n I_{IH}}$$

where

- n = number of inputs connected
 - I_{IH} = high input current (typical 40 μA)
 - $V_{CC(min)}$ = minimum supply voltage, V_{CC}
 - V_{CCP} = maximum peak voltage of the supply voltage, V_{CC} (about 7 V)
- (2)

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "--" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

NOTES:

1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.43 mm, per side.
5. Reference JEDEC registration MS-012, variation AB.
