

TS3USB221 具有单使能端的 高速 USB 2.0 (480Mbps) 1:2 多路复用器或多路信号分离器开关

1 特性

- V_{CC} 工作范围为 2.3V 和 3.6V
- $V_{I/O}$ 支持高达 5.5V 的信号
- 1.8V 兼容控制引脚输入
- $\overline{OE}$ 禁用时采用低功耗模式 (1 μ A)
- $R_{ON} = 6\Omega$ (最大值)
- $\Delta r_{ON} = 0.2\Omega$ (典型值)
- $C_{IO(ON)} = 6\text{pf}$ (最大值)
- 低功耗 (最大值为 30 μ A)
- ESD > 2000V 人体放电模型 (HBM)
- 高带宽 (典型值为 1GHz)

2 应用

- 符合 USB 1.0、1.1 和 2.0 标准的信号路由
- 移动产业处理器接口 (MIPI™) 信号路由
- MHL 1.0

3 说明

TS3USB221 是一款高带宽开关，专为手持和消费类应用（例如手机、数码相机和具有集线器的笔记本电脑或具有受限 USB I/O 的控制器）中的高速 USB 2.0 信号切换而设计。此开关具有较宽的带宽 (1GHz)，这一特性使得信号传递具有最少的边缘失真和相位失真。该器件将 USB 主器件差动输出复用到一个相应的输出（共两个输出）。此开关为双向开关，输出端高速信号具有极少或零衰减。TS3USB221 旨在降低位间偏移并改善通道间噪声隔离。TS3USB221 同样能够兼容各种标准，例如高速 USB 2.0 (480Mbps)。

- (1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. *Absolute Maximum Ratings* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.
- (2) All voltages are with respect to ground, unless otherwise specified.
- (3) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (4) V_I and V_O are used to denote specific conditions for $V_{I/O}$.
- (5) I_I and I_O are used to denote specific conditions for $I_{I/O}$.
- (6) The I/O pins are 5.5V tolerant and functional for the entire range. However, for $V_{I/O} > 3.6V$, the channel RON is high (up to 100Ω).

(1) V_{IN} and I_{IN} refer to control inputs. V_I , V_O , I_I , and I_O refer to data pins.

(2) All typical values are at $V_{CC} = 3.3V$ (unless otherwise noted), $T_A = 25^\circ C$.

(3) For I/O ports, the parameter I_{OZ} includes the input leakage current.

(4) This is the increase in supply current for each input that is at the specified TTL voltage level, rather than V_{CC} or GND.

(5) Measured by the voltage drop between the A and B terminals at the indicated current through the switch. ON-state resistance is determined by the lower of the voltages of the two (A or B) terminals.

(2) Specified by design

(3) The bus switch contributes no propagational delay other than the RC delay of the on resistance of the switch and the load capacitance. The time constant for the switch alone is of the order of 0.25ns for 10pF load. This time constant adds very little propagational delay to the system because the time is much smaller than the rise/fall times of typical driving signals. Propagational delay of the bus switch, when used in a system, is determined by the driving circuit on the driving side of the switch and the switch interactions with the load on the driven side.

7 Detailed Description

7.1 Overview

The TS3USB221 device is a 2-channel SPDT switch specially designed for the switching of high-speed USB 2.0 signals in handset and consumer applications, such as cell phones, digital cameras, and notebooks with hubs or controllers with limited USB I/Os. The wide bandwidth (1GHz) of this switch allows signals to pass with minimum edge and phase distortion. The device multiplexes differential outputs from a USB host device to one of two corresponding outputs. The switch is bidirectional and offers little or no attenuation of the high-speed signals at the outputs. The device also has a low power mode that reduces the power consumption to 1 μ A for portable applications with a battery or limited power budget.

The device is designed for low bit-to-bit skew and high channel-to-channel noise isolation, and is compatible with various standards, such as high-speed USB 2.0 (480Mbps).

The TS3USB221 device integrates ESD protection cells on all pins, is available in a SON package (3mm $\times$ 3mm) as well as in a tiny μ QFN package (2mm $\times$ 1.5mm) and is characterized over the free-air temperature range from -40°C to 85°C .

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 Low Power Mode

The TS3USB221 has a low power mode that reduces the power consumption to 1 μ A when the device is not in use. The bus-switch enable pin $\overline{\text{OE}}$ must be supplied with a logic high signal to put the device in low power mode and disable the switch.

8 Application and Implementation

备注

以下应用部分中的信息不属于 TI 器件规格的范围，TI 不担保其准确性和完整性。TI 的客户应负责确定器件是否适用于其应用。客户应验证并测试其设计，以确保系统功能。

8.1 Application Information

There are many USB applications in which the USB hubs or controllers have a limited number of USB I/Os. The TS3USB221 can effectively expand the limited USB I/Os by switching between multiple USB buses and interface with the buses on a single USB hub or controller. TS3USB221 can also be used to connect a single controller to two USB connectors.

8.2 Typical Application

图 8-1. Simplified Schematic

8.2.1 Design Requirements

Follow the design requirements of the USB 1.0, 1.1, and 2.0 standards.

TI recommends that the digital control pins S and $\overline{OE}$ be pulled up to V_{CC} or down to GND to avoid undesired switch positions that can result from the floating pin.

8.2.2 Detailed Design Procedure

The TS3USB221 can operate properly without any external components. However, TI recommends to connect unused pins to ground through a $50\ \Omega$ resistor to prevent signal reflections back into the device.

8.2.3 Application Curves

图 8-2. Eye Pattern: 480Mbps USB Signal With No Switch (Through Path)

图 8-3. Eye Pattern: 480Mbps USB Signal With Switch NC Path

图 8-4. Eye Pattern: 480Mbps USB Signal With Switch NO Path

8.3 Power Supply Recommendations

Make sure the power to the device is supplied through the V_{CC} pin and follows the USB 1.0, 1.1, and 2.0 standards. TI recommends placing a bypass capacitor as close as possible to the supply pin V_{CC} to help smooth out lower frequency noise to provide better load regulation across the frequency spectrum.

8.4 Layout

8.4.1 Layout Guidelines

Place supply bypass capacitors as close to V_{CC} pin as possible. Avoid placing the bypass caps near the D+/D – traces.

Make sure the high-speed D+/D – trace lengths match and are no more than 4 inches, otherwise the eye diagram performance can degrade. A high-speed USB connection is made through a shielded, twisted pair cable with a differential characteristic impedance. In the layout, make sure the impedance of D+ and D – traces match the cable characteristic differential impedance for optimal performance.

Route the high-speed USB signals using a minimum of vias and corners to reduce signal reflections and impedance changes. When a via must be used, increase the clearance size around the via to minimize the capacitance. Each via introduces discontinuities in the transmission line of the signal and increases the chance of picking up interference from the other layers of the board. Be careful when designing test points on twisted pair lines; through-hole pins are not recommended.

When it becomes necessary to turn 90°, use two 45° turns or an arc instead of making a single 90° turn. This reduces reflections on the signal traces by minimizing impedance discontinuities.

Do not route USB traces under or near crystals, oscillators, clock signal generators, switching regulators, mounting holes, magnetic devices or ICs that use or duplicate clock signals.

Avoid stubs on the high-speed USB signals because stubs cause signal reflections. If a stub is unavoidable, keep the stub less than 200mm.

Route all high-speed USB signal traces over continuous planes (V_{CC} or GND), with no interruptions.

Avoid crossing over anti-etch, commonly found with plane splits.

A printed circuit board with at least four layers is recommended because of high frequencies associated with the USB; two signal layers separated by a ground and power layer as shown in 图 8-5.

图 8-5. Four-Layer Board Stack-Up

Make sure the majority of signal traces run on a single layer, preferably Signal 1. Make sure the GND plane, which is solid with no cuts, is immediately next to this layer. Avoid running signal traces across a split in the ground or power plane. When running across split planes is unavoidable, sufficient decoupling must be used. Minimizing the number of signal vias reduces EMI by reducing inductance at high frequencies. For more information on layout guidelines, see [High Speed Layout Guidelines](#) and [USB 2.0 Board Design and Layout Guidelines](#).

9.5 静电放电警告

静电放电 (ESD) 会损坏这个集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

Orderable part number	Status (1)	Material type (2)	Package Pins	Package qty Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
TS3USB221DRCR	Active	Production	VSON (DRC) 10	3000 LARGE T&R	Yes	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	ZWG
TS3USB221RSE	Active	Production	UQFN (RSE) 10	3000 LARGE T&R	Yes	NIPDAU NIPDAU	Level-1-260C-UNLIM	-40 to 85	(L57, L5H, L5O, L5R, L5V)

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
